Crumb & Co: Final Demo Script and Submission Checklist

Capstone 27, Step 9. A 6-minute demo plan, a recording checklist and a final-submission tracker.

Goal of the demo

Show, in about six minutes, that you used AI to draft a business plan, checked it properly, and can say which parts were most likely to be wrong and why. The strongest demo shows evidence (the error log, real prices, a live change in the model), not just slides.

Before you record

- Open these tabs in this order: the Financial Outline, the revenue model (Google Sheets), the Verification Report and Error Log, the Real Price Tracker, the Time Comparison sheet, and the deck.
- Close everything else, and turn off notifications.
- Zoom the browser to about 125% so text is readable on a recording.
- Do one silent dry run with a timer. Aim for 5 to 6 minutes.
- Test your microphone with a 10-second clip.

Run of show

Time	What you show	What you say (key points)
0:00 to 0:30	Title slide	The project question: can AI help write a first-draft business plan, and which parts are most likely to be wrong? Introduce Crumb & Co, a home bakery in Chennai
0:30 to 1:30	Prompt library and the AI First Draft	How you prompted: a context prompt, then one prompt per section. Name the tools you used (at least four) and what each did
1:30 to 2:30	Revenue model in Google Sheets	Walk through Assumptions, Products and Break-even. Then change one input live (for example owner's pay from 15,000 to 0, or a cake price) and show break-even and payback move

Time	What you show	What you say (key points)
2:30 to 4:00	Verification Report and Error Log	Pick your three best catches (see below). For each: what the AI claimed, what you found, the source, and what you changed
4:00 to 4:45	Time comparison and mentor feedback	Minutes with AI vs without, including time spent checking. One piece of feedback you accepted and one you rejected, with reasons
4:45 to 5:30	Before and After Analysis	What changed between the first draft and the final plan. What the AI got right (arithmetic, structure)
5:30 to 6:00	Lessons slide	Answer the project question in two sentences and give one recommendation

Your three best catches to show

Choose three that show different kinds of error.

1. **Outdated or wrong rules:** the licensing line of ₹20,000, when FSSAI registration costs about ₹100 and the turnover limit is now ₹1.5 crore. Also mention that an AI tool (Claude, in chat) cited the old ₹12 lakh limit. It shows honesty about AI error, including your own tools.
2. **Numbers that look back-solved:** every product costed inside a "35 to 40% target range". Show the price tracker's illustrative costing next to it.
3. **A budget line that fails a real-world check:** ₹2,500 a month for gas and electricity, against one commercial cylinder at about ₹2,984.

Spare options: cake prices 37% to 51% above Chennai listings, and the ₹4,300 vs ₹5,800 fixed-cost inconsistency.

Skills and tools to name

The brief asks for at least 6 AI skills and at least 4 tools. Say them out loud.

Skill	Where you used it
Prompt engineering	Context prompt and section prompts
Content writing	Plan sections and the deck text

Skill	Where you used it
Research and verification	Verification Report, price tracker, sources
Presentation tools	The 6-slide deck
Productivity workflow	Sheets model, time log, doc templates
Responsible AI	Labelled assumptions, error log, honest uncertainty

Tools to list (replace with the ones you actually used): Claude, Gemini, ChatGPT if used, Google Sheets, Google Docs, Gamma.

Responsible AI points to mention

- Every AI number was treated as an assumption until checked.
- Sources and dates are recorded, and weak sources (undated listings, low-reliability sites) are marked as such.
- No personal data was put into AI tools.
- Where evidence was missing, the plan says so instead of guessing.

Recording tips

- Use a free screen recorder: your phone or laptop's built-in recorder, or OBS Studio. Check which tool your course accepts.
- Record in one take if you can, and keep any mistakes you correct on camera brief and honest.
- Watch the whole recording once, and check that no private information (email addresses, tabs, notifications) is visible.
- Save the file and a backup copy, and upload it where your reviewer can open it.

Backup plan

- If the Sheet is slow, keep a screenshot of the model with the break-even table visible.
- If you run long, cut the live model change first, then the spare examples.
- If you cannot record video, use narrated slides and screenshots.

Questions you may be asked

Question	Outline of your answer
Did AI save you time?	Give the net figure after checking time. Mention that checking cost time and was worth it
What was the most serious error?	Pick the one with the biggest money or compliance effect, probably the licensing line or the gas and electricity budget
How do you know your corrections are right?	Official source for the licence rules, dated listings for prices, your own test week for utilities. Name what remains unverified
Would you trust this plan with real money?	Not yet. Say which assumptions still need your own data (demand, recipe costs, test-week bills)
What would you do differently?	Build costs from recipes first, ask the AI for sources, and verify rules before drafting numbers
Is the AI draft a plan or a starting point?	A starting point. It gave structure and arithmetic but could not know current rules or local conditions

Final submission tracker

Update the status column as you finish each item.

Deliverable	Where it is	Status
Business plan (all five sections)	Financial Outline plus your other four sections, compiled into one document	Check that all five sections are included
Revenue model	Bakery_Revenue_Model.xlsx	Built. Update it with your verified numbers
Deck (6 slides)	Gemini prompt provided, deck to be built	Not started
Error log	Verification Report and Error Log doc	Done. Add new entries as you find them

Deliverable	Where it is	Status
Time comparison	Time_Comparison.xlsx	Template built. Needs your times
Prompt library	Your prompt log (prompt, tool, time, quality note)	Compile into one document
Verification report	Verification Report and Error Log doc	Done
Before/after analysis	Before and After Analysis doc	Started. Fill the pending rows
Final demo	Recording	This step

Final checks before you submit

1. Every number in the deck matches the revenue model.
2. Every pending row in the change log is either applied or explained.
3. The time comparison has measured or clearly labelled estimated times.
4. Names, dates and placeholders in the deck and emails are filled in.
5. All links open for someone who is not you (check sharing settings).
