Crumb & Co: Prompt Library

Capstone 27 deliverable. Every prompt used or recommended in the project, with space to log how each one performed.

How to use this library

1. Copy a prompt, run it in the tool, and record the result in the prompt log at the end.
2. Log the tool, the date, the minutes taken, a 1 to 5 quality rating, and any problems you found.
3. When a problem matches an entry in the Error Log, write its ID (E1 to E14) in the last column.
4. Status key: **Provided** means the prompt was given in this project and you should confirm you ran it. **Recommended** means it is a new prompt you can run.

Square brackets are placeholders to replace before you send.

A. Setup prompt

P1. Context prompt (status: Provided)

Suggested tool: Claude. Send this first in a new chat, then send the section prompts one at a time.

> You are helping me write a first-draft business plan for a fictional home bakery. Business name: Crumb & Co. Location: Chennai. Products: eggless cakes (½ kg and 1 kg), brownie boxes (6), cookie boxes (10), gift hampers. Target customers: families, college students, office and birthday orders. Sales channel: Instagram and WhatsApp orders. Starting budget: ₹1,00,000. Keep all answers realistic and consistent with these details. Where you give a number, label it as an assumption and say how I can verify it. Reply "ready" and wait for my section requests.

What to check: did the AI label its numbers as assumptions, and did it stay consistent with these details later?

B. Section drafting prompts

P2. Executive summary (status: Provided)

> Write a 200-word executive summary covering the problem, offer, target market, and the funding I need.

P3. Market (status: Provided)

> Describe the target market, customer segments, local competitors (as types, not made-up names), and market size. Mark every statistic as 'needs verification'.

What to check: market-size statistics and competitor claims are where AI is most likely to be wrong.

P4. Operations (status: Provided)

> Outline daily operations: sourcing, baking workflow, equipment list, food licensing/safety requirements, packaging, delivery, and a weekly schedule.

What to check: licensing rules and fees. These change, so verify them on the official FSSAI and FoSCoS sites.

P5. Marketing (status: Provided)

> Create a marketing plan for the first 6 months: positioning, pricing strategy, Instagram/WhatsApp tactics, offers, and a monthly budget.

What to check: prices against real Chennai listings, and the monthly budget against the financial outline.

P6. Financial outline (status: Provided)

> Give a financial outline: startup costs, monthly fixed costs, per-product ingredient cost and selling price, expected orders per week, and break-even point. Present it as tables and label every number as an assumption.

What to check: arithmetic, back-solved cost percentages, missing costs, and consistency between tables.

P7. Financial follow-up (status: Provided)

Use this if the first financial outline lacks fixed costs, break-even or a ramp-up.

> Continuing the financial outline for the home bakery: give me (1) monthly fixed costs as a table (rent share, utilities, gas, internet, marketing, software, insurance/licence renewals), each labelled as an assumption in ₹; (2) the break-even point in orders per week and in ₹ revenue, with the formula shown; (3) a 12-month ramp from 15 to 30 orders per week. Include delivery cost per order and any platform or payment fees in variable costs.

Note: your outline's ramp was 9 to 28 orders a week, so record the exact prompt you used for that version.

C. Presentation prompts

P8. Gemini deck content prompt (status: Provided)

Suggested tool: Gemini.

> You are helping me build a 6-slide summary deck for a capstone project. Write the content for exactly 6 slides. For each slide, give: a title (under 10 words), 3 to 4 short bullets (under 15 words each), one suggested visual (chart, icon or diagram), and 2 sentences of speaker notes.
>
> Use ONLY the facts below. Do not invent numbers, sources or statistics. If something is marked [PLACEHOLDER], keep it as a placeholder.
>
> PROJECT: "Can AI help write a first-draft business plan, and which parts are most likely to be wrong?" BUSINESS: Crumb & Co, a fictional home bakery in Chennai. Products: eggless cakes (1/2 kg and 1 kg), brownie boxes (6), cookie boxes (10), gift hampers. Customers: families, college students, office and birthday orders. Sales channel: Instagram and WhatsApp orders. Startup budget: Rs 1,00,000.
>
> SLIDE 1: Title slide. Project question, business name, [PLACEHOLDER: my name and date].
>
> SLIDE 2: The business. Products, customers, sales channel, startup budget, and the startup cost split: equipment Rs 35,000, licensing and packaging Rs 20,000, opening stock Rs 15,000, marketing and photography Rs 15,000, cash reserve Rs 15,000.
>
> SLIDE 3: The numbers (AI's first-draft model). Average order value Rs 667. Contribution per order Rs 359 after ingredients, packaging and 8% wastage. Break-even orders per month: 17 with no owner's pay, 58 with Rs 15,000 owner's pay, 86 with Rs 25,000. Order ramp from 9 to 28 orders a week over 6 months. Startup cost recovered around month 8 (with Rs 15,000 owner's pay). Suggested visual: line chart of revenue vs total costs over 12 months.
>
> SLIDE 4: What the AI got wrong or could not support.
>
> - Licensing budget of Rs 20,000: the FSSAI registration fee is about Rs 100, so the line is mostly unitemised packaging.
> - Cake prices are 37% to 51% above comparable Chennai listings (1/2 kg: Rs 750 vs Rs 530 to 549; 1 kg: Rs 1,400 vs Rs 930 to 999). Brownie box is 28% above (Rs 480 vs Rs 375).
> - Costs for every product fall inside a 35 to 40% "target range", which suggests they were back-solved, not built from recipes.
> - Gas and electricity budget of Rs 2,500 a month is below the cost of one commercial LPG cylinder (about Rs 2,984).
> - The projection and the break-even section used different fixed costs (Rs 4,300 vs Rs 5,800).
> - An AI tool cited an outdated FSSAI limit (Rs 12 lakh). Since 1 April 2026 it is Rs 1.5 crore.

> SLIDE 5: How I checked it. Tools used: [PLACEHOLDER: list at least 4 tools]. Steps: prompt library, revenue model in Google Sheets, verification report and error log, price tracker with real Chennai prices, mentor or peer review [PLACEHOLDER: one line of feedback received]. Time comparison: [PLACEHOLDER: minutes without AI vs with AI].
>
> SLIDE 6: Lessons. AI is strong at structure and arithmetic. It is weak on current rules, local prices and its own assumptions. Treat every confident number as an assumption until verified. Verify licences, prices and costs first. End with one recommendation for anyone using AI to draft a plan.
>
> Style: warm bakery-friendly palette (cream, brown, soft orange), clean layout, no photos of people. After the 6 slides, list any numbers you were unsure about.

P9. Gamma prompt (status: Provided)

Suggested tool: Gamma. Paste this followed by the slide text.

> Create a 6-slide presentation from the text below. Keep exactly 6 slides, use a warm bakery-friendly colour palette, no stock photos of people, and short bullet text. Use the numbers exactly as written.

D. Verification and responsible-AI prompts

These are new. Run them to strengthen your cross-checking evidence.

V1. Second-model cross-check (status: Recommended)

Suggested tool: Gemini or ChatGPT. Paste the Financial Outline at the end.

> Below is a financial outline for a home bakery in Chennai. List every claim that could be wrong, outdated or unsupported: numbers, rules, fees, prices and assumptions. For each one, give the claim, why it might be wrong, and the kind of source that would confirm it (official site, price listing, my own bills). Do not assume any claim is correct. [paste outline]

V2. Confidence and source request (status: Recommended)

Suggested tool: Claude. Send it as a follow-up to any section.

> For each figure in your last answer, say whether it is a fact you are confident about, an estimate, or a guess. For facts, name the type of source and the date the figure applies to. If you cannot name a source, say so.

V3. Bottom-up recipe costing (status: Recommended)

Suggested tool: Claude.

> Help me cost one product bottom-up. Product: eggless ½ kg cake. Ask me for my recipe quantities and my ingredient prices, then calculate the cost per cake in a table. Do not invent prices or quantities. If anything is missing, ask me.

V4. Consistency check (status: Recommended)

Suggested tool: Claude or Gemini.

> Compare these two sections and list every number that differs between them or is calculated differently, with the section and line where each appears. Do not fix anything yet. [paste sections]

E. Prompt improvements

Problems found in Step 4, with better wording for next time.

Problem found	Original wording	Better wording
Costs looked back-solved from a target	"per-product ingredient cost and selling price"	"Build each product's ingredient cost from a recipe: list ingredients, quantities and prices, then total them. Do not start from a target percentage."
Outdated licensing information	"food licensing/safety requirements"	"Describe the licensing requirements and fees. State the date your information is current to, and name the official site where I should confirm it."

Problem found	Original wording	Better wording
Missing costs	"startup costs, monthly fixed costs..."	"Include delivery, payment fees, wastage, utilities and the owner's pay as separate lines."
Demand unverified	"expected orders per week"	"Give a low, expected and high range of orders per week and the assumption behind each."
Sections disagreed with each other	(no instruction)	"Use the same fixed-cost figure in every section, and flag any number that differs from an earlier answer."

F. Prompt log

Record every run, including reruns and failures.

ID	Purpose	Tool	Date	Minutes	Quality (1 to 5)	Problems found	Error-log ID
P1	Context prompt						
P2	Executive summary						
P3	Market						
P4	Operations						
P5	Marketing						
P6	Financial outline						
P7	Financial follow-up						
P8	Gemini deck content						
P9	Gamma deck						
V1	Second-model cross-check						
V2	Confidence and source request						
V3	Recipe costing						
V4	Consistency check						

G. What the prompts taught you

Add your own notes here after you finish the log. Useful points to cover: which prompt wording gave the best first drafts, where asking the AI to label assumptions helped, and where it still produced confident but wrong figures.
