Home Bakery Business Plan: Steps 1 and 2

Capstone 27: AI Business Plan Draft Assistant

Step 1: Lock in your business profile

Fill this in now. Every prompt reuses it, so the AI's answers stay consistent.

- **Business name:** (invent one, e.g., "Crumb & Co.")
- **City/area:** (use your own city so real local numbers for rent, ingredient prices and delivery costs can be verified)
- **Products:** 3 to 5 items (e.g., cakes, cupcakes, cookies, brownies, tea-time boxes)
- **Customers:** (e.g., families, college students, office parties, birthday orders)
- **Sales channel:** (Instagram/WhatsApp orders, delivery through a courier app, weekend pickup)
- **Starting budget:** (e.g., ₹1,00,000)

Time log: open a Google Sheet tab called "Time Log" with these columns: Task | Method (AI / No AI) | Start | End | Minutes | Notes. You will use it in Step 7.

Step 2: Draft the plan with AI

Baseline first, with no AI

Set a timer and write a 150-word executive summary yourself. Log the minutes under "No AI". This is your baseline for the time comparison.

Context prompt

Open a new Claude chat and paste the prompt below, with your profile details filled in:

> You are helping me write a first-draft business plan for a fictional home bakery. Business name: [NAME]. Location: [CITY]. Products: [LIST]. Target customers: [LIST]. Sales channel: [CHANNEL]. Starting budget: [AMOUNT]. Keep all answers realistic and consistent with these details. Where you give a number, label it as an assumption and say how I can verify it. Reply "ready" and wait for my section requests.

Section prompts

Send these one at a time, and log each in your prompt library (prompt, tool, time taken, quality note 1 to 5):

1. **Executive summary:** "Write a 200-word executive summary covering the problem, offer, target market, and the funding I need."
2. **Market:** "Describe the target market, customer segments, local competitors (as types, not made-up names), and market size. Mark every statistic as 'needs verification'."
3. **Operations:** "Outline daily operations: sourcing, baking workflow, equipment list, food licensing/safety requirements, packaging, delivery, and a weekly schedule."
4. **Marketing:** "Create a marketing plan for the first 6 months: positioning, pricing strategy, Instagram/WhatsApp tactics, offers, and a monthly budget."
5. **Financial outline:** "Give a financial outline: startup costs, monthly fixed costs, per-product ingredient cost and selling price, expected orders per week, and break-even point. Present it as tables and label every number as an assumption."

Save the raw outputs

Save each raw AI output unedited in a Google Doc titled "AI First Draft". You will need it for the before/after analysis in Step 8 and for spotting hallucinations in Step 4.

Tip for the error log

As you read the outputs, highlight anything suspicious right away, such as exact market-size statistics, specific licence rules, or competitor claims. Those are where AI is most likely to be wrong.

Next

Send your city or area, business name and products, and the prompts can be filled in for you.
